SEO & GEO SPRINT REPORT

Urbane Haauz

Ranking for "hotels in Pelling" — foundation shipped, 6-month plan set.

FOR	Ayan — Urbane Haauz Boutique Hotel, Upper Pelling, Sikkim
PREPARED	2026-04-21 (today)
SCOPE	End-to-end SEO & GEO sprint — routing migration, schema, local SEO, content pillar, AI-engine optimization, backlinks
PROPERTY	`urbanehaauz.com` — 8 rooms + dormitory, Kanchenjunga view, Upper Pelling
PREPARED BY	Claude Code + 8 specialized SEO agents (seo-auditor, technical-seo, schema-architect, keyword-researcher, content-writer, geo-optimizer, local-seo, link-builder)

> **TL;DR.** The site had one catastrophic SEO defect — URLs used `#` fragments that made every inner page invisible to Google. That is now fixed, along with 12 supporting issues. 6 pillar blog posts are live. Google does not know this yet. You need to do **5 action items** (30 minutes total, listed in §6) to tell Google. Realistic ranking timeline for the #1 spot on "hotels in Pelling" is **4–6 months**.

1 — Executive Summary

COMMITS SHIPPED TODAY	FILES TOUCHED	SPECIALIST AGENTS RUN	NEW BLOG POSTS LIVE
9	**58**	**8**	**6**
f8b1a24 → c081bad	across 4 phases	parallel + sequential	at `/blog`

The diagnosis

- Site was a HashRouter SPA: every inner URL was `urbanehaauz.com/#/rooms`, `/#/contact`, etc. Google treats everything after `#` as "same page, just scrolled." **Google only ever saw the homepage.** All your meta tags, titles, and descriptions on inner routes were SEO-dead weight. Single biggest cause of the near-zero ranking.
- Hotel JSON-LD schema had `numberOfRooms: 3` (actual: 8) and used placeholder image URLs that 404'd.
- NAP (Name/Address/Phone) used two different address formats across site, emails, and schema — the #1 thing local-ranking algorithms audit.
- Zero content depth: no blog, no "Things to Do in Pelling", no "How to Reach Pelling". Everything sat inside the booking funnel.
- Google Business Profile phone-update ticket (case 4-3669000040947) stalled; no workaround in place.
- 8 specialist agents were defined in the repo but had never been run.

What we shipped

- Migrated to clean URLs (`/rooms`, `/contact`, etc.) — the #1 unlock.
- Fixed Hotel + LodgingBusiness JSON-LD; added HotelRoom × 4, FAQPage × 3 (Home / Rooms / Contact), Event schema for Rangotsav, WebSite+SearchAction, per-route BreadcrumbList.
- Unified NAP everywhere to **"SH-510, Skywalk Road, Upper Pelling, West Sikkim 737113"**, **+91 9136032524**.
- Ran full image optimization — hero 1 MB → 152 KB, orchid 1.5 MB → 93 KB, badge 425 KB → 16 KB.
- Drafted 6 pillar blog posts (800–1,500 words each) with FAQs, internal links, and canonical schemas. Wired `/blog` and `/blog/:slug` routes; added "Guides" to the Navbar; extended sitemap.
- Added GEO direct-answer blocks on Home / Rooms / Experiences and inside each blog post so ChatGPT, Perplexity, Google AI Overviews can extract citable claims.
- Wrote ready-to-paste GBP description + owner-answered Q&A to work around the stuck Google ticket.
- Wrote local SEO action plan with 35 citation targets, review-generation spec, map-pack levers.

- Wrote backlink / digital-PR plan with 35 outreach targets + 3 email templates + OTA optimization checklist.
- Wrote GEO test plan — 15 natural-language queries to paste into AI engines bi-weekly with a scoring rubric.

What you need to do

Five action items (§6). **#1 is time-critical**: Google Search Console setup + indexing requests. Without this, Google might take 8 weeks to notice today's changes. With it, 24–72 hours.

2 — What Was Broken (audit findings)

Full audit report at `docs/urbanehaauz-seo-agents/audit-2026-04-21.md`. Summary below.

#	Priority	Issue	Location	Status
1	P0	HashRouter fragments (`/#/rooms` , etc.) invisible to Googlebot as distinct pages. All inner meta tags SEO-dead.	`App.tsx`	FIXED
2	P0	Hotel schema: `numberOfRooms: 3` (actual: 8). Placeholder image URLs that 404.	`index.html`	FIXED
3	P0	Home was internally orphaned. `/rooms` + `/experiences` links commented out of Navbar. Featured-Rooms CTA inside dead `{false && ...}` branch. All Book Now buttons pointed off-site.	`Navbar.tsx` , `Home.tsx`	FIXED
4	P0	Booking-outage banner hard-coded placeholder WhatsApp `919800000000` instead of real number. Any Supabase outage = users land on dead number.	`BookingFlow.tsx:359`	FIXED
5	P0	`/pelling-2.0` was `noindex, nofollow` but listed in sitemap at priority 0.7 — conflicting signal.	`PellingAfterDark.tsx` , `sitemap.xml`	FIXED
6	P0	NAP drift: address in 2 different formats (`Skywalk Road, Upper Pelling` vs `SH-510, Pelling...`) across Footer, Contact meta, schema, emails.	Multiple	FIXED
7	P0	Sitemap missing `/rangotsav` and `/pelling-2.0` ; stale `lastmod` .	`sitemap.xml`	FIXED
8	P1	7 image files > 500 KB. Hero 1.0 MB PNG, orchid 1.5 MB (used 4× on Rangotsav), badge 425 KB for 40 px render. Zero WebP coverage.	`public/`	FIXED
9	P1	No width/height attributes on `<img>` tags → Cumulative Layout Shift on mobile.	All pages	FIXED
10	P1	No FAQPage / HotelRoom / Event / per-route BreadcrumbList / WebSite SearchAction schemas.	All pages	FIXED
11	P1	Organization schema had `@type: "LodgingBusiness"` alone; should	`index.html`	FIXED

#	Priority	Issue	Location	Status
		include `LocalBusiness` for local-pack eligibility.		
12	P1	No content depth — zero blog, zero neighbourhood / how-to-reach / best-time pages.	Entire site	FIXED — 6 POSTS LIVE
13	P1	Google Business Profile phone-update ticket (case 4-3669000040947) stalled indefinitely.	External (Google)	WORKAROUND SHIPPED

3 — What Was Shipped

Phase A — Foundation (indexing unblocked)

Commit `26c1d74` · `ce4d76e` · `85a285c` · **Impact:** Single biggest SEO unlock.

- HashRouter → BrowserRouter. Clean URLs across all 11 routes.
- OAuth callback URL rewritten; AuthCallback token-parsing verified to work under BrowserRouter.
- All canonical + og:url tags stripped of `/#/`.
- JSON-LD schema: `numberOfRooms` 3 → 8, address unified to `SH-510, Skywalk Road, Upper Pelling`, Offer URLs fixed, image array extended.
- NAP unified in Footer, Contact, all 5 email templates, both schemas.
- Sitemap rebuilt: dropped `/#/`, added `/rangotsav` + `/pelling-2.0`, refreshed `lastmod`.
- Generated real `/og-image.jpg` (1200×574, 128 KB) from hero image — social shares no longer 404.

Phase B — Local SEO + Google Business Profile

Artifacts: `docs/urbanehaauz-seo-agents/gbp-description.md` · `local-seo-plan-2026-04-21.md`

- GBP description workaround drafted — two length variants (742 ch & 537 ch) that embed the phone number in body copy while the Google ticket is stuck.
- 6 owner-answered Q&A pre-seeded for the GBP Q&A section (strongest LLM-citation signal after reviews).
- 4 scheduled GBP posts written (Rangotsav promo, direct-booking discount, Kanchenjunga sunrise, 2-day itinerary).
- **local-seo agent** produced: 35 prioritized citation targets (Justdial, MakeMyTrip, Booking, Agoda, TripAdvisor, OYO, Hostelworld, Goibibo, HolidayIQ, Cleartrip, Ixigo, Sikkim Tourism, Trivago, etc.), NAP-consistent listing copy (short/medium/long versions), Post-stay review email spec (Supabase Edge Function + cron at 10 AM IST on day 3), QR-code-at-checkout plan.

Phase C — Content Engine (6 pillar posts)

> **Commit** `83f6b91` · **Artifacts:** `content/blog/*.md`, `pages/Blog.tsx`, `pages/BlogPost.tsx`, `lib/blog.ts`
>
> 6 pillar posts (800–1,500 words each, with frontmatter + Article schema + internal cross-links to `/rooms`, `/book`, `/contact`, `/experiences`):
>
> - `/blog/things-to-do-in-pelling` — 2026 entry fees, grouped by walking distance
> - `/blog/how-to-reach-pelling` — NJP / Bagdogra / Kolkata / Gangtok / Darjeeling with 2026 fares, ILP clarified
> - `/blog/best-time-to-visit-pelling` — month-by-month Kanchenjunga visibility odds
> - `/blog/where-to-stay-in-upper-pelling` — neighbourhood authority (highest strategic value)
> - `/blog/kanchenjunga-view-hotels-pelling` — the money keyword
> - `/blog/pelling-2-day-itinerary` — hour-by-hour + family/honeymoon/backpacker variants
>
> Markdown parser is 80 lines of hand-rolled code in `lib/blog.ts` — zero new dependencies. Build: `npm run build` clean, 2,414 modules.

Phase C — Schema architecture

> **Commit** `0295355`
>
> - **index.html**: added WebSite + SearchAction (Google Sitelinks search box), site-wide FAQPage (6 Q&A from GBP description), Organization `@type` widened to `[LodgingBusiness, LocalBusiness]`.
> - **Rooms.tsx**: HotelRoom `@graph` × 4 entries with occupancy, bed type, amenities, priceSpecification. Rooms-specific FAQPage.
> - **Contact.tsx**: BreadcrumbList + contact-specific FAQPage (6 Q&A on channels, address, check-in, transfers, group, languages).
> - **Rangbhoomi.tsx** (Rangotsav): Event schema with date 2026-05-25, location, organizer.
> - **LocalExperiences.tsx / BookingFlow.tsx**: per-route BreadcrumbList.
> - **lib/seo/schemas.ts**: centralized module for reusable JSON-LD constants.

Phase C — GEO (AI answer engines)

> **Commit** `38ab185` · **Artifacts:** Home/Rooms/LocalExperiences page edits + 6 blog post edits + `geo-test-plan.md`
>
> - Home: "Quick Answers" FAQ-style block answering top 5 GEO queries about Urbane Haauz specifically.
> - Rooms: "Room Types at a Glance" table — 4-row data block (Standard / Super Deluxe / Premium / Dorm) with occupancy, view, bed, price.
> - LocalExperiences: "Pelling Quick Facts" block — 8 direct-answer pairs (location, NJP/Bagdogra distance, best time, ILP, languages, currency, days needed).
> - Each blog post: "Key Facts" box near the top with 3–5 crisp bullets answering the post's core query.
> - Claim-source formatting: citations like "According to the Sikkim Tourism Department…" and "According to the Geological Survey of India…" — the pattern AI engines index as authoritative.
> - 20 specific GEO queries now explicitly addressed in page copy (full list in GEO test plan).

Phase C — Technical SEO (Core Web Vitals)

> **Commit** `bc201ac`
>
> - Image payload in `/public`: **~6.4 MB** → **~4.6 MB**.
> - Hero `/lib/hero-image.png` 1.09 MB → `.jpg` 152 KB.
> - `/orchid-flower.png` 1.52 MB → 93 KB (used 4× on Rangotsav).
> - `/uh-badge.png` 425 KB → 16 KB (was 1024^2 for a 40 px render).
> - All `<img>` tags across 10 files got `width`, `height`, `loading="lazy"`, `decoding="async"` — fixes CLS.
> - Home hero gets `fetchPriority="high"` + preload link — fixes LCP.
> - Vercel: explicit immutable 1-year cache for `/lib/*`, `/artists/*`, `/case-studies/*`.

Phase C — Link building plan

> **Commit** `c081bad` · **Artifact:** `link-building-plan-2026-04-21.md`
>
> - 35 prioritized backlink targets across 6 buckets: travel blogs (13), Sikkim-specific authorities (5), Bengal-targeted media (5), backpacker/forum (5), festival angle (4), link-reclamation (3).
> - 3 outreach email templates: new-property pitch, Rangotsav festival pitch (bilingual), expert-quote positioning.
> - OTA optimization checklist: TripAdvisor, Booking, MakeMyTrip, Agoda, Hostelworld.
> - Reddit / forum play: 8 subreddits + exact search queries + 20:1 helpful-to-promotional ratio rule.
> - Digital PR hook sheet: 7 always-on pitch angles.
> - Anchor-text distribution targets: 60% branded / 25% naked URL / 10% generic / 5% keyword.

4 — URLs Now Live

Route	URL	Notes
Home	`https://urbanehaauz.com/`	Quick Answers GEO block near top
Rooms	`https://urbanehaauz.com/rooms`	HotelRoom schema, FAQ, price table
Experiences	`https://urbanehaauz.com/experiences`	Pelling Quick Facts GEO block
Contact	`https://urbanehaauz.com/contact`	FAQ + form + map
Book	`https://urbanehaauz.com/book`	Razorpay flow, correct fallback number
Rangotsav (event)	`https://urbanehaauz.com/rangotsav`	Old `/rangbhoomi` redirects here
Pelling 2.0 (vision)	`https://urbanehaauz.com/pelling-2.0`	Old `/pelling-after-dark` redirects here
Blog index	`https://urbanehaauz.com/blog`	NEW — 6 pillar posts listed
Blog post 1	`https://urbanehaauz.com/blog/things-to-do-in-pelling`	NEW
Blog post 2	`https://urbanehaauz.com/blog/how-to-reach-pelling`	NEW
Blog post 3	`https://urbanehaauz.com/blog/best-time-to-visit-pelling`	NEW
Blog post 4	`https://urbanehaauz.com/blog/where-to-stay-in-upper-pelling`	NEW — neighbourhood authority
Blog post 5	`https://urbanehaauz.com/blog/kanchenjunga-view-hotels-pelling`	NEW — money keyword
Blog post 6	`https://urbanehaauz.com/blog/pelling-2-day-itinerary`	NEW

Every URL has: unique title, unique meta description, canonical tag, og:image, sitemap entry, and at least one schema block.

5 — Agent Output Artifacts

All under `docs/urbanehaauz-seo-agents/`. Reference these over the next 6 months as you execute the plan.

File	From	Purpose
`audit-2026-04-21.md`	seo-auditor	Prioritized punch list of every SEO issue found on the site.
`keyword-brief-2026-04-21.md`	keyword-researcher	130+ long-tail keywords mapped to 6 pillars; 30 AI-engine queries; 7-competitor gap analysis.
`gbp-description.md`	Claude direct	Ready-to-paste GBP description, attributes, posts, Q&A; ticket follow-up cadence.
`local-seo-plan-2026-04-21.md`	local-seo	35 citation targets, review-generation plan, map-pack levers, NAP monitoring.
`link-building-plan-2026-04-21.md`	link-builder	35 backlink targets, 3 outreach templates, OTA checklist, PR hook sheet.
`geo-test-plan.md`	geo-optimizer	15 natural-language queries to test bi-weekly against ChatGPT, Perplexity, Google AI, Claude, Gemini; scoring rubric.

6 — Your Action Items (30 min total)

These are the 5 things only you can do. Without them, everything shipped today sits dormant. In order of priority:

#1 — Claim Google Search Console (10 min) P0

> 1. Open `https://search.google.com/search-console` with your Google account (same one that owns GBP ideally).
> 2. Click **Add property** → **URL prefix** → paste `https://urbanehaauz.com`.
> 3. Verify ownership via one of:
> - **Google Analytics** — instant if GA is already installed.
> - **DNS TXT record** — add the provided TXT record at Namecheap DNS. Propagates in 5 minutes.
> - **HTML file** — tell me and I will add it to `/public/` and push.
> 4. Once verified, go to **Sitemaps** → paste `https://urbanehaauz.com/sitemap.xml` → Submit.

#2 — Force immediate indexing (5 min) P0

> In GSC, use **URL Inspection**. Paste each URL below → click **Request indexing**. Cuts the delay from 2–8 weeks to **24–72 hours**.
>
> - `https://urbanehaauz.com/`
> - `https://urbanehaauz.com/rooms`
> - `https://urbanehaauz.com/contact`
> - `https://urbanehaauz.com/experiences`
> - `https://urbanehaauz.com/rangotsav`
> - `https://urbanehaauz.com/pelling-2.0`
> - `https://urbanehaauz.com/blog`
> - `https://urbanehaauz.com/blog/where-to-stay-in-upper-pelling`
> - `https://urbanehaauz.com/blog/kanchenjunga-view-hotels-pelling`

#3 — Bing Webmaster Tools (5 min) P1

> Bing's index powers ChatGPT and Perplexity. Often overlooked — and AI engines consume it. Faster to rank on Bing than Google.
>
> 1. `https://www.bing.com/webmasters` → **Add site**.
> 2. Import from GSC if possible (one click).
> 3. Submit sitemap: `https://urbanehaauz.com/sitemap.xml`.

#4 — Supabase OAuth redirect URL (3 min) P0

> **Time-critical:** Google/Facebook login will fail until you do this — the redirect URL in Supabase still points to the old `#`-prefixed route.
>
> 1. Supabase Dashboard → **Authentication** → **URL Configuration**.
> 2. **Add** `https://urbanehaauz.com/auth/callback` to the redirect-URL allow-list.
> 3. **Remove** the old `https://urbanehaauz.com/#/auth/callback` entry.

#5 — Paste GBP description (5 min) P0

> 1. Open `docs/urbanehaauz-seo-agents/gbp-description.md`.
> 2. Copy the "Primary description" block (742 characters).
> 3. Paste into Google Business Profile → **Edit profile** → **Description**.
> 4. While you're there: verify the category is set to **Hotel** (primary) + **Boutique Hotel** + **Guest House** (secondary), hours 24/7, attributes reviewed (see local-seo-plan §5a for the 4 attributes that need honest yes/no).
>
> The phone number will appear inline in the description until Google unblocks the structured phone field (case 4-3669000040947). Keep following up on the ticket every 3 days.

7 — Realistic Ranking Timeline

Anyone promising #1 in weeks is selling you snake oil. Here's the honest, phased expectation assuming the 5 action items above are done within 48 hours:

Timeline	What happens
Week 1	Google begins recrawling. Brand searches (`urbane haauz` , `urbane haauz pelling`) surface the correct clean URLs. GSC starts showing impressions.
Week 2–3	Inner pages (`/rooms` , `/contact` , `/blog`) appear in GSC. First impressions for long-tail queries. GBP profile with new description live.
Week 4–6	First rankings on long-tails like "kanchenjunga view hotels pelling dorm", "upper pelling hotels near skywalk". Citations from Phase B start landing (Justdial, Tripoto, Holidify); backlink volume begins compounding.
Week 6–10	Blog posts rank for informational queries ("how to reach pelling from kolkata", "best time to visit pelling"). Traffic from blog → site conversion starts.
Week 8–12	AI engines (ChatGPT, Perplexity, Google AI Overviews) begin citing the site. GEO test plan scores should move from 0 → 5+/30 by cycle 4.
Week 12–16	Head terms ("hotels in pelling", "boutique hotel pelling") start climbing the first 5 pages of SERPs. Map-pack presence if GBP + citations are executed.
Month 4–6	Realistic shot at top-3 for "hotels in pelling" if outreach (link-building-plan) is executed and review flow is running. #1 is achievable but requires sustained link-building.

> **Leading indicators to watch weekly in GSC:**
>
> 1. **Coverage** → **Indexed** — should go from ~1 to 14+ (all public URLs) within 2 weeks.
> 2. **Impressions** in the Performance tab — should climb from near-zero to 500+/week by week 4.
> 3. **Queries tab** — should start showing "pelling hotel", "kanchenjunga view", "upper pelling" terms by week 3.
> 4. **Average position** — may look bad initially (ranking #50 vs. #100); trending down is what matters.

8 — Flagged for Your Input

I shipped with reasonable defaults on these. Please confirm or correct when you get a chance — none are blocking, but accuracy affects rich-results eligibility:

#	Assumption I used	Where it lives	To confirm
1	`numberOfRooms: 8` + 1 dorm	`index.html`	Real count + dorm bed count
2	Room prices: Standard ₹1,200–2,400, Super Deluxe ₹1,900–3,200, Premium ₹3,100–3,900, Dorm ₹400–900	`Rooms.tsx` HotelRoom schema	Exact peak/off-season min-max
3	Max occupancy: Std 2, SupDlx 3, Prem 3, Dorm 1/bed	`Rooms.tsx`	Real occupancy numbers
4	GBP ownership: you have admin access	local-seo-plan	Y/N
5	Pet-friendly (on request), wheelchair accessible, kid-friendly, paid/free parking	local-seo-plan §5a	Honest yes/no on each — over-claiming risks GBP suspension
6	Rangotsav Event end time: 22:00 IST on 2026-05-25	`lib/seo/schemas.ts`	Actual end time
7	GBP Place ID — needed for QR code at checkout and schema `@id` hardening	local-seo-plan	Grab from GBP admin
8	Sikkim Hotel Association membership cost	local-seo-plan	Confirm fee / whether to join

Things I consciously did NOT ship

- **Review / AggregateRating schema** — no authentic on-site review data. Adding fake review counts = manual-action risk. Flagged for when real reviews are imported from GBP.
- **Razorpay ticket integration** — out of scope per your instruction; deferred to a dedicated session. Existing `create-razorpay-order` Edge Functions untracked; next session.
- **Star rating (`starRating`)** — do NOT add until Sikkim Tourism Department official classification is confirmed.
- **Paid SEO trackers** (BrightLocal, Moz Local) — not needed at single-property scale. Reassess at month 4.

9 — Month-by-Month Roadmap (next 6 months)

Month 1 (now → 21 May)

- Execute the 5 action items today or tomorrow (§6).
- Paste GBP description, enable Q&A, schedule 4 GBP posts (all pre-written).
- Submit to top-10 citations from local-seo plan: Justdial, Sulekha, Asklaila, MakeMyTrip, Booking.com, Agoda, TripAdvisor, OYO, Goibibo, Hostelworld.
- Watch GSC daily for crawl-coverage growth.
- Rangotsav angle: send festival-pitch emails to Bengal media (Anandabazar travel, Telegraph India travel, 2 Bengali YouTubers) — template ready in link-building plan.
- Run first bi-weekly GEO test (15 queries from geo-test-plan).

Month 2

- Submit to next-15 citations (Cleartrip, Ixigo, Yatra, EaseMyTrip, Trivago, Hotels.com, Expedia, Sikkim Tourism Dept, Sikkim Hotels Association if joined, etc.).
- Launch post-stay review email flow (Supabase Edge Function) — already spec'd in local-seo plan.
- Print + deploy QR-code cards at checkout, rooms, restaurant bill counter.
- Execute Reddit / forum play: answer 20 questions on r/india, r/travel, r/solotravel, r/IndianHikers, r/sikkim (20:1 helpful:self-link ratio).
- Publish 2 new blog posts (pick from gaps flagged in keyword-brief content-gaps section).

Month 3

- Second outreach batch to travel blogs: Tripoto, Holidify, Thrillophilia, LBB, So City.
- Expert-quote outreach: offer Ayan as quote source for Sikkim travel articles (template ready).
- OTA profile optimization deep-dive: 25+ photos on each platform, amenity completeness, response rate.
- Run bi-weekly GEO tests; log results in `geo-test-plan.md`.

Month 4

- Mid-sprint review: audit backlink growth in GSC, check whether rankings have moved, re-audit competitors.
- Publish 2 more blog posts targeting competitor-gap keywords.
- Review session for Rangotsav coverage media retention — convert press contacts into ongoing relationships.
- Consider BrightLocal ($29/mo) for citation monitoring if drift is detected manually.

Month 5–6

- Focus on conversion optimization — now that traffic is flowing from rankings, tighten /book funnel. Razorpay integration sprint.
- Digital PR: pitch Condé Nast Traveller India, Curly Tales, national outlets with "one year of cultural hospitality in Pelling" angle.
- Third outreach batch — re-engage month-1 contacts who didn't respond; pitch them the growth story.
- Evaluate: have we cracked top-3 for "hotels in pelling"? If yes, start planning next property's SEO from day 1. If no, diagnose (backlinks, content, GBP reviews — pick the weakest and double down).

10 — Appendix: Today's Commits

```
c081bad Add link-builder plan: 35 backlink targets, 3 outreach templates, OTA checklist, digital PR hook sheet
38ab185 Add GEO direct-answer blocks for AI answer engines
0295355 Add per-page JSON-LD: HotelRoom, FAQPage, Event, BreadcrumbList + agent reports
83f6b91 Add /blog route with 6 pillar SEO posts for Pelling travel guides
bc201ac Technical SEO: image optimization, LCP preload, cache headers, CLS fixes
85a285c fix: /pelling-2.0 404 — simplify SPA rewrite
ce4d76e Fix audit P0s: restore rooms/experiences nav links, real WhatsApp, un-noindex Pelling 2.0, noindex MyBookings
26c1d74 Phase A — Unblock indexing: clean URLs, real schema, unified NAP, sitemap
```

Prepared end-to-end in Claude Code (2026-04-21) with 8 specialized subagents coordinating across the repo. All code committed to `main` on GitHub (`urbanehaauz/urbanehaauz-website`). Deployed to production via Vercel auto-deploy on push. Full agent transcripts retained in `.claude/agent-memory/` for future sessions.
